

Golf Car Traffic

Mother Nature has been very good to all of the golfers so far this winter with warmer than normal temps in January and only 4 frosts! Unfortunately she hasn't been as nice with the rainfall this winter. Our area is behind normal rainfall 5 ½ inches in past two months alone and the golf courses are starting to show the wear and tear with all of the golf car and foot traffic and the drought conditions. Consequently we all need to do our part and together we can keep our course in the best possible shape given the circumstances.

We are asking two things of our golfers to help our courses be the best they can be:

- Please use the 90 degree rule when riding off the golf car path onto the fairways. That is to say, please exit the golf car path at 90 degrees to your ball, drive to your golf ball, then you're riding partner's ball and return straight back to the golf car path. Additionally, when possible, please drive your golf car in the rough areas and avoid worn areas as much as possible.
- When checking in with the Starter you will be asked to pair up so your four-some will be using only two golf cars. We realize there are at times, personal reasons for wanting to ride in your own golf car, but in order to provide the best possible conditions; we need to minimize unnecessary golf car traffic. If there remains a compelling or necessary reason for your group to take three golf cars during your round, one of the three golf cars will be required to remain on the golf car path on each hole.
