## Executive Golf

Summer rains have continued to remain steady through the month of July. Our present forecast, however, shows these rains will continue into the first part of the month of August.

We continue to utilize golf courses to dump water and various courses will be closed periodically for water management needs. We understand this is a minor inconvenience but implementing these closures ensure the integrity of our infrastructure.

As a gentle reminder, we are still in the middle of Hurricane season. It is extremely important to be prepared with hurricane emergency plans and understand there may be frequent weather pattern changes up until the end of November.

In August, our budgeted golf maintenance projects for the summer months continue to stay on track. Hawks Bay is 90% complete with the renovations of green and tee surfaces. Silver Lake Cart paths should be completed by months end.

The summer is flying by quickly and we continue to implement our plans for long term sustainability and successful growth throughout the summer. Thank you for your patience and understanding as you play the courses and are able to observe our progress.

### ***TURF TIP:***

#### ***Mechanical Aeration***

This is a mechanical method of removing cores of compacted soil from heavily trafficked compressed areas of your playing surfaces. This is completed at various times of the year to aid in root system development and promote good grass health. A quality top dressing material such as sand is then filled into holes for a new growth medium for roots to spread and develop. This also allows for a smoother putting surface to play from until healed.
